

## Light, strong and easy to handle

The smallest furlers in the Furlex family are used as standard equipment on numerous dinghies, small catamarans and keelboats. They feature stainless ball bearings for long life, composite components for low weight and clever designs to reduce friction. Properties that have made Furlex the world's best-selling furling systems since early 80's.

- All structural parts are stainless steel
- Glass fibre reinforced polyamide composite for drum and cover.
- Double stainless ball bearings in the drum distribute the radial load evenly and reduces friction.
- The line exit fairlead of the cover can be orientated in several positions to achieve the correct angle for the furling line.
- An optional Top Swivel Guide separates the jib from the forestay to prevent the forestay from being twisted with the jib luff.
- The Top Swivel of Furlex 30S and 40S is tapered to fit in narrow forestay angles.
- All Top Swivels come with low friction stainless ball bearings to prevent the halyard from twisting.

Furlex 20S for smaller dinghies with  $\varnothing 3$  mm forestays.

Furlex 30S / 40S for dinghies, keelboats and small catamarans with  $\varnothing 4$  mm forestays.

Technical specifications	Furlex 20S	Furlex 30S	Furlex 40S
Dimensioned for forestay diameter, $\varnothing$ (mm)*	3	4	4
Max service load, (forestay), kg	500	900	900
Max service load, (halyard swivel), kg	--	300	300
Max recommended LP** measurement, mm	2500	2500	3000
Furling line diameter, $\varnothing$ mm	2,5	4	5

\* Forestay wire is not included.

\*\* See illustration

Dimensions, mm	Furlex 20S	Furlex 30S	Furlex 40S
Top swivel height (TS)	35	52	52
Top swivel guide, length (TSG)	100	100	100
Halyard swivel height (HSH)		90	90
Halyard swivel deduction (HSD)		180	180
Tack fitting height (TF)		55	55
Lower swivel height (LS)	60	106	117
Drum diameter, $\varnothing$ (D)	70	85	100
Hole diameter, $\varnothing$ (HD)	5,5	8,5	8,5
Pin diameter, $\varnothing$ (P)	5,8	8	8
