

Single-line reefing

Seldén utilised its experience in developing simple, easy-to-use reefing systems for its yacht range to create the ultimate single-line reefing system for dinghies.

Recreational sailors and sailing schools have told us that they wanted to reduce sail easily whilst out on the water. Many simple zip and roll arrangements had been developed in the past, but reducing sail in this manner had to be done before going afloat.

As a result of this feedback, Seldén created a simple single-line reefing system that allows a portion of the sail to be pulled down horizontal to the boom, with a simple pull of the reefing line and easing of the mainsail halyard. Available as an option with either a conventional or gnav arrangement boom, the system takes the sting out of any dinghy when the wind gets up.

Slacken the mainsheet.

Tension the reef line up to the marked position on the line.

Reefline routing.

The reef is in. Adjust the mainsheet. It's as simple as that!
