

New: Innovative Turnbuckle from Seldén

– Perfect Balance of Function, Form and Durability

Seldén introduces a new generation of turnbuckles that complements our classic range. Available in sizes from 1/4" to 1 1/4", for wire diameters ø3–19 mm. With its elegant and functional design, this turnbuckle is the natural choice for both new builds and rigging upgrades.

The body and terminals are made of acid-resistant stainless steel AISI 316, ensuring maximum durability in marine environments. A **bronze** thread insert reduces friction, providing smooth adjustment and long service life – even with frequent use.

The round body features a distinctive wrench grip for a firm hold with an adjustable spanner. A slot on one side allows for easy measurement of the distance between terminals during tuning.
