

How to position your mast coat

The final positioning of the mast coat should be done when the mast is stepped in the boat.

Tools needed:

Pencil

Sharp knife or a pair of scissors

Assembly

1. Slide the mast coat into position, so that it stands on the deck ring.
2. Draw a line around the mast at the top edge of the mast coat (fig 1.)
3. Push the mast coat away from the line (upwards or downwards).

Fig 3

4. Place rubber tape 530-471 with its upper edge on the pencil line, (fig 2.) Start at the front of the mast and work round to the front again.
5. Cut the tape so that the ends overlap by approximately 10 mm. (fig 3.)
6. Pull the mast coat gently into place over the tape. A screw driver or similar tool may be used as a shoehorn.
7. Fit the clip over the mast coat and tighten it hard.
8. Fit the large clip around the deck ring.
